ABSTRACT OF THE DISCLOSURE

[0096]   A system and method for presenting an interactive visual feedback, based upon input parameters, indicating quality levels in terminal location detection in a network at selectable points on a map. The system and method includes an application in which a user provides information regarding network terminals, terminal locations, and map parameters. In response, the application then provides a visual indication of expected accuracy in geo-location calculations for terminals at specific points in a network map.
